Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2-20 and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Suzuki et al 4,937,411 in view of Tang 5,886,326.

Suzuki et al teach heating of waste to carbonize the waste and further heating to incinerate and create energy from the waste. the claims call for an initial heating to dry the waste and in this respect the patent to Tang is applied for clearly teaching drying the waste before incineration via microwave, See the abstract in Tang for instance. This drying step leads to more efficient incineration incineration this teaching it would have been obvious to modify the Suzuki et al system with an initial drying step, to more efficiently incinerate the waste. As per claims 2-7, use of particular frequencies for the microwave, use of a glass chamber and use of particular temperatures is considered routine and obvious design skill for the artisan, such choices dependent on the end use of the device and the materials incinerated. Use of magnets, electromagnets or conductive coil as per claim 16 is likewise an obvious choice inn design, dependent on the end use of the device.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Pearson, Moraski and Yokoyama et al are cited for disclosing waste processing systems of interest to the instant invention
